

Inspection of Civil Engineering Structures

Civil Engineering Inspection

To complement its inspection portfolio, ETMS is expanding to include inspection of concrete structures. Through a thorough inspection of your building, ETMS helps you identify areas where concrete works are required, and provides you support to determine the best course of action to maintain your structure.

Why ETMS?

We work for you. We are objective.

As ETMS is not linked to a contractor, we are impartial. We do not receive commissions from contractors or equipment manufacturers.

Services offered

ETMS offers the following services:

- Assessment of issues and provision of a report with proposed solutions.
- Accompany Clients during the choice of contractors by analyzing quotes and material proposed.
- Accompany Clients to ensure the works are of good quality and will meet the intended objectives.
- Regular Follow-up and Management.
- Proposals for phased improvement of your building.

Methodology

To allow for an accurate assessment of your building, ETMS will:

- Perform a walkthrough of your building with you to discuss your issues and understand your vision.
- Analyze your building plans to understand the underlying issue and make recommendations.
- Liaise with contractors and plan the works to result in minimal disturbances.
- Follow-up on the repairs after the works are completed to ensure the problem is solved.

We accompany you every step of the way.

Who?

Matthieu Quevauvilliers is a trained Civil Engineer from the University of Cape Town, a globally renowned university. Matthieu has worked for a contractor, and in operations, before joining ETMS.
