

# Financial Asset Management Case Study Total

## Financial Asset Management

### Project Description:

With 47 service stations, 6 depots and 362 client sites across the island, TOTAL Mauritius positions itself among the leading suppliers of petroleum products in the petroleum distribution sector. Safety is of essence in the sector and so is quality services for its clients.

The objective of project is to list all assets owned fully or in joint ventures by the client, install tags on them and upload their details on a web-based platform which is accessible through a mobile app for site verifications. Photos were taken of the assets and uploaded on the website to help in future identification and in regular site audits. The AMS360 web-based platform has other functionalities which were not implemented like integration with an ERP, facilities management and insurance management modules, etc...

### Services provided by ETMS:

- Provision of AMS360 Web-based asset management services through our partner IPIN Technologies (Pty) Ltd with a mobile app for verification
- Configuration of asset database structure
- Uploading of existing assets
- Verification of assets on the ground
- Reconciling the assets with existing client SAP database
- Procurement of 7000 Aluminium QR code tags and 2 ATEX rated scanners
